

Talha Ahmad

Laravel Developer

I am a **Laravel developer** with hands-on experience in building robust web applications. I specialize in **backend development**, **CRUD operations**, **SQL query handling**, and **API integrations**. With a strong foundation in **Laravel** and proficiency in **jQuery** and **AJAX**, I am passionate about creating efficient, scalable solutions for various projects across different domains.

EDUCATION

BS Computer Science

Government College University Faisalabad
(Sahiwal Campus)

WORK EXPERIENCE

Laravel Developer

TechWrath

03/2024 - 01/2025

Lahore

I work remotely **part-time** with **TechWrath**, specifically on the **United Cricket Led (UCL)** project. UCL is a **cricket management system** designed to handle teams, players, and tournaments efficiently. It also features **RESTful APIs** for seamless data integration and real-time updates, making it a powerful tool for managing cricket events.

Achievements/Tasks

- At **TechWrath**, while working on the **UCL** project, I gained hands-on experience in **role management**, implementing user permissions and access control. I also worked on **CRUD operations**, developing and optimizing features for managing teams, players, and tournaments. Additionally, I learned to design and integrate **RESTful APIs**, enhancing data communication between systems. This experience has strengthened my skills in **backend development**, **database management**, and **API integration**.

Laravel Developer

Solutions Wave

04/2024 - Present

Lahore

I am currently working at **Solutions Wave**, where I have contributed to multiple projects, including **Monmatics** and **Monmatics (CNC)**. In addition to these, I have also worked on an **NGO-based project** and several other applications across different domains. My role involves **backend development**, **API integrations**, and **system optimization**, allowing me to gain diverse experience in building scalable and efficient solutions.

Achievements/Tasks

- At **Solutions Wave**, I have gained extensive experience in **Laravel**, developing robust backends and complex business logic for projects such as **Monmatics**, **Monmatics (CNC)**, and an **NGO-based project**. I've also built dynamic, interactive applications using **jQuery** and **AJAX**, providing real-time data updates and seamless user interactions. Additionally, I have strengthened my skills in **SQL query handling**, optimizing complex queries, joins, and ensuring efficient data retrieval. My work also involved designing and integrating **RESTful APIs**, enhancing system performance and data flow. Through these diverse projects, I have built strong expertise in **backend development**, **database management**, and **full-stack development**.

SKILLS

PHP

Bootstrap

Jquery

Ajax

PERSONAL PROJECTS

Monmatics (04/2024 - Present)

- Monmatics** is an advanced business management system designed to streamline operations across multiple domains. Currently in development, it features various modules to enhance business efficiency. The **Accounts** module allows seamless financial transaction management, while **Support & Tickets** provides an intuitive ticketing system for handling customer queries and issue tracking. The **CRM** module helps businesses strengthen customer relationships, and **Sales** enables effective tracking of the sales process from lead to closure. Additionally, the **Cargo Manager** facilitates logistics and shipment tracking, and **Vendor Management** simplifies supplier interactions and procurement. The **Admin Panel** offers centralized control over system configurations and user roles. With a robust and scalable architecture, **Monmatics** aims to be an all-in-one solution for businesses looking to optimize workflows, improve efficiency, and drive productivity.

Monmatics (CNC) – Precision CNC Data Automation (10/2024 - Present)

- Monmatics (CNC)** is a specialized system designed for **CNC machining operations**, enabling seamless **generation of DAT files** required for high-speed CNC machines. This system automates the process of **data conversion**, **toolpath optimization**, and **machine code generation**, ensuring precision and efficiency in manufacturing workflows. Key features include **automated G-code/DAT file generation**, **real-time machine parameter adjustments**, and **integration with high-speed CNC controllers**. With a focus on accuracy and efficiency, **Monmatics (CNC)** enhances productivity by **minimizing manual intervention**, reducing errors, and optimizing machine performance for complex manufacturing tasks.

United Cricket Led (UCL) (03/2024 - 01/2025)

- United Cricket Led (UCL)** is a comprehensive cricket management system designed to streamline team management, player statistics, and tournament organization. Built with a focus on efficiency, UCL provides a seamless platform for managing matches, recording scores, and tracking player performance. The system supports **RESTful APIs**, enabling smooth integration with external applications and ensuring real-time data updates for teams, tournaments, and match results. Whether you're organizing a local league or managing a professional cricket tournament, UCL delivers the tools needed for an efficient and engaging cricket experience.

Monmatics NGO (06/2024 - Present)

- In the **Monmatics NGO** project, I handled the **Accounts** and **Admin** modules, focusing on streamlining financial management and system administration for the organization. I worked on developing and optimizing features related to **accounting** processes, such as tracking donations, managing funds, and generating financial reports. Additionally, I played a key role in the **Admin module**, overseeing user roles, permissions, and ensuring smooth system operations for administrators. This experience strengthened my skills in both **accounting systems** and **backend management**.
